

COLD TEMPERATURE CARTON SEALING TAPES

Designed for Packaging Environments Below 35 F

You expect that your carton sealing tape will perform reliably and maintain its bond – even in harsh, cold conditions. It's why Shurtape® offers carton sealing tapes specifically engineered for frigid environments, delivering consistent, high-performance adhesion from the start of application and maintaining a strong hold through service process in conditions reaching below freezing.

Our specially formulated AP and HP Series cold temperature packaging tapes are designed to provide an instant, permanent bond for light- to medium-weight cartons for both manual and automated packaging applications. Available in light to heavy duty grades with acrylic, hot melt and sustainable options, these packaging tapes are ideal for applications where the carton sealing environment falls below 35 F, such as frozen foods, meat and poultry processing, dairy facilities and unheated warehouses and storage facilities in cold weather climates.

Shurtape cold temperature carton sealing tapes deliver the strong hold you need without compromising quality or product performance when the temperature drops.
