

ShurSEAL[®]
PACKAGING SOLUTIONS

PRIMEALERT[™] TAPE MONITORING SYSTEM

In high-speed packaging environments, even a small case sealing issue can bring production to a halt. PrimeAlert[™] advanced tape monitoring system detects problems in real time, before they lead to costly disruptions, helping boost automated packaging line efficiency while reducing unplanned downtime.

With instant visual and audible indicators, PrimeAlert gives operators the visibility to act fast and stay in control. The result? Decreased delays, more consistent seals and minimized waste, all delivered through a smarter, more proactive approach to packaging line performance.

PRIMEALERT™ TAPE MONITORING SYSTEM

An add-on feature to ShurSEAL® Packaging Solutions, PrimeAlert is designed to issue audible and visual alerts to signal packaging line operators of following case sealing faults:

- Low tape
- Broken tape
- Case jam
- No tape
- Uncut tape

PrimeAlert is available with an optional light tree installed, giving you the flexibility to maintain control of your packaging line, even when you can't be right there. PrimeAlert can also be tied into your programmable logic controller (PLC) system to stop the case erector/sealer or conveyor before issues get out of hand, providing an extra check and balance on your end-of-line operations.

With PrimeAlert in place, you can stop worrying about case seals and start putting your attention to other things.

PRIMEALERT 1 FOR LINES WITHOUT PLC SYSTEM

- Wireless, self-contained
- Battery-powered, self-recharging
- Water-resistant, making it capable of being washed down in sanitary and other like environments
- Easily retrofit to the ShurSEAL 7000 Series packaging solutions

PRIMEALERT 2 FOR LINES WITH PLC SYSTEM

- Proximity sensing module can be mounted to the machine framing
- Wired directly to PLC-24VDC
- Can be retrofit to ShurSEAL 7000 Series or 8000 Series/Quick Change packaging solutions
